Dear Madam,

Subject: Government's consultation paper on:  
"Digital Television" The Principles for Spectrum Planning.

Concerning planning for the above Spectrum, we ask you to kindly consider our comments and views for the future requirements for the Broadcast and Entertainment Production, Spectrum Requirements for Studio, Stage, Venue and Location.

- The demand for wireless/radio microphones and In-Ear monitors is growing and will continue to grow. Production houses and Television Companies are demanding more channels per production than ever before. We are a relatively new business however, the loss of even the smallest amount of spectrum would have a devastating effect on our business and our future. Please do not underestimate the economic effect of any loss of spectrum would have, not only to our Company but the whole United Kingdoms entertainment industry. This includes of course, our music export productions that represent considerable export earnings.
- We write to confirm that we support and agree with JFMGs predictions of demand for channels as laid out in their response document "Predictions for spectrum demand" for 2006. Please recommend and agree to these minimum spectrum needs as detailed in JFMGs report.

Yours truly

Geoff Ingle  
Managing Director
